Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

The disclosure is objected to because of the following informalities: the specification should be amended to refer to this application as a 371 of the PCT application.

Appropriate correction is required.

Claim Objections

Claims 1, 4 and 25 are objected to because of the following informalities: in claim 1 line 8 "that" should be inserted after "fact", in claim 4 correction of the claim dependency is required "one or more of claims 1", and in claim 25 "realizing should be "having". Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are replete with vague and indefinite language. The claims attempt to set forth the structure by describing the assembly procedure of the device in claims 1 ("the support cage is structured for mounting its structural modules in a direction axially"), 5-8, 11, 12, and 20. the structure should be set forth positively in its assembled form.

The following terms in the claims do not have proper antecedent basis:

- in claim 1 "the structural modules", "its structural modules";
- in claim 2 "the flared rim";
- in claim 3 "the wall", "protruding stator pack connectors";
- in claim 4 "stator pack connectors" ;
- in claim 9 "the receptacle", "the wall";
- in claim 13 "suction blower", and;
- in claim 18 "the marginal portion" and "the flared rim".

The terms "Upper", "upwardly", "interior", and "bottom side" in claim s 1, 2 and 9 are relative terms which render the claims indefinite. The terms are not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

In claim 1 lines 10 and 11 it is unclear what is in direct contact.

In claim 2 line 3 it is unclear what "its" refers to.

In claim 6 it is unclear if the material after "for receiving" is part of the claimed material.

In claim 10 it is unclear what is in direct contact.

In claim 12 it is unclear if the housing is inserted into the receptacle.

In claim 16 it is unclear what structure is defined by "flexibly linked". In claim 19 "or the like" is confusing.

In claim 26 it is unclear if the material after "especially" is intended to further limit the claims.

In claim 1 line 3 it is unclear if the material after "such as" is intended to further limit the claims.

Claims 1-26 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Conclusion

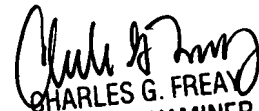

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kim et al, Warner et al, Ciccarelli and Numata et al disclose electric motor driven impeller pumps. Steffes et al discloses an electric motor having brushes driving a pump.
